

WRONGFUL DEATH: *THE AIDS TRIAL*

FACT SHEET

BRIEF BOOK SYNOPSIS: *WRONGFUL DEATH: The AIDS Trial* is a fictitious courtroom drama that exposes the government lies and incompetence, gross medical malpractice, and unbridled greed by a drug company that caused our American AIDS epidemic and cost 300,000 lives – more than five times as many killed in the entire Vietnam War.

THE SHOW: It's the 25th anniversary of AIDS. But what if everything we've been told about AIDS and HIV is a lie? Mr. Davis will shock your audience as he explains:

- HIV cannot be the cause of AIDS; it fails every medical and scientific test.
- The man who announced he discovered HIV had a history of scientific misconduct and fraudulent research claims.
- AIDS is not a sexually transmitted disease. In fact, it's not contagious at all.
- 300,000 Americans died, not from AIDS caused by HIV, but from taking AZT – the drug that was supposed to cure them.
- Hundreds of thousands of innocent women and children are now being murdered in Africa by that same lethal drug, while the drug company rakes in millions of dollars in profit
- Thousands more in the U.S. are being given a “death sentence” if they are HIV-Positive, when in fact the HIV blood test is totally unreliable and inaccurate.

SAMPLE QUESTIONS

- Magic Johnson and Arthur Ashe – both HIV-positive...why did one live and one die?
- How many AIDS cases have been found with the HIV virus? (Davis will give a free book to the first caller w/ the answer: “None!”)
- How can HIV cause AIDS if there are over 4000 cases who are HIV-negative? (“It can't!”)
- How many people lived for more than 4 years while taking full-strength AZT? (“None!”)
- How long have people lived as HIV-positive who didn't take AZT? (“More than 25 years!”)
- So what *does* cause AIDS if HIV doesn't?

IS IT ALL JUST FICTION?

Mr. Davis will provide you and your audience with more than 900 medical and scientific references to back up every word he says in the interview and every bit of testimony in *Wrongful Death: The AIDS Trial*.

AUTHOR BIO: Stephen Davis is a former Arizona State Senator and Physician's Assistant. He won the George Washington Medal of Honor from Freedoms Foundation at Valley Forge in 1975 for his published article, *The Government Versus The Economy*, and he has spent the last ten years researching the HIV-AIDS controversy.

FULL BOOK SYNOPSIS

WRONGFUL DEATH: *The AIDS Trial* is a work of fiction based on fact: the true story behind the government lies and incompetence, gross medical malpractice, and unbridled greed by a drug company that caused our American AIDS epidemic and cost 300,000 lives.

Follow along with attorney Benjamin Messick and health reporter Sarah Meadows in this class-action lawsuit as they expose the man who claims to have discovered the cause of AIDS, Dr. Robert Gallo. Dr. Gallo announced to the world at a press conference on April 23, 1984 that a virus later to be called HIV was the culprit. Unfortunately, Dr. Gallo's peers were never given the chance to prove his theories, and still can't to this day. In fact, according to the witnesses in *The AIDS Trial*, HIV fails every medical and scientific test and cannot be the cause of AIDS.

It turns out that Dr. Gallo is nothing more than a common criminal, a thief, and a liar. He finally admitted he had stolen the AIDS virus from a French researcher. He also stole another virus from the Japanese. He lied on his patent application for the HIV blood test. A congressional investigation found Dr. Gallo guilty of "intellectual recklessness of a high degree," and the Office of Research Integrity of the Department of Health and Human Services found Dr. Gallo guilty of scientific misconduct and called some of Dr. Gallo's key AIDS research, "of dubious scientific merit" and "really crazy." As one German scientist put it, Dr. Gallo is "an American scientific gangster who has committed so many crass, self-aggrandizing blunders...that he could not really be relied upon to tell the time correctly."

Attorney Messick questions a number of witnesses who all agree with 2300 of the world's leading doctors and medical researchers today, including Nobel Prize winners in chemistry and medicine and members of the U.S. National Academy of Sciences, that HIV cannot cause AIDS.

Discover from the expert witnesses in *The AIDS Trial* what actually **does** cause AIDS. Testimony in *The AIDS Trial* finally discloses that in the decade from 1987 to 1997, three-hundred-thousand Americans (mostly homosexual men) died **not** from some horrible disease they caught from a virus, but as a result of taking the very drug they were told would cure them. Urged on by their doctors, parents, families and loved-ones, these HIV-positives took AZT, a drug originally designed and created in 1964 to kill cancer cells, but found to be far too toxic to a human body.

Read the testimony of witness after witness - all based on over 900 actual medical and scientific research papers and reports - that when the FDA finally approved AZT for the treatment of AIDS in 1987, it began **causing** Acquired Immune Deficiency Syndrome; and every person who took it - healthy or not at the time - would die within three years from one of many different opportunistic diseases.

Be prepared for the anger and outrage *you* will feel when you realize that hundreds of thousands of innocent women and children are being murdered today in Africa, simply because they are HIV-positive, while the drug company rakes in millions of dollars in profits.

If you like courtroom drama, you'll *want* to read this book. If you ever knew someone with AIDS or HIV, you *need* to read this book.

If you still believe the government and the FDA are protecting you against deadly diseases and dangerous drugs, you *must* read this book!
